*Est 1974*

In keeping with the Student Right to Know Act (SRTK), Montana Christian College publishes retention and graduation rates for all of its academic programs. Retention rates are calculated by observing the students in any given year who are degree seeking. This data point calculates the percentage of first-time traditional undergraduate students who remained a student the following fall semester. Graduation rates are calculated by following a cohort of students who are full-time students for the first time in any college that are degree or certificate seeking. The cohort from each school is tracked over a period of time. Graduates are measured by those in the cohort who have earned their degree in 150% of the normal time to completion (i.e., 6 years for a 4-year program) or 200% of the normal time to completion (i.e., 8 years for a 4-year program).
